It's All About Expectations

Markets

It was another eventful week for global markets as rising US treasury yields sent markets into cautious mode with increasing expectations that inflation in the US is set to trend higher. Interestingly, we are already seeing a shift among debt issuers in the US with more companies now opting to issue fixed rate bonds in order to lock-in their cost of borrowing. However, the Fed's dovish stance helped market to continue to scale greater heights with the Dow and S&P500 both hitting fresh record highs.

Economy

Across the US, rising yield has attracted fresh monies into the market with foreign holdings of US treasuries rising by US\$49bil month on month in January 2021, with about half of it coming from Japan. Japan now holds approximately US\$1.25 trillion of US treasuries or about 17.6% of total foreign holdings. China meanwhile reported strong retail and industrial output data for the first two months of 2021. Both were against a low base from last year and hence they rose by a significant margin of 33.8% and 35.1% respectively. The Fed held interest rates unchanged, as expected, and maintained its dovish stance with the view that both economic activity and inflation is bound to rise. The Fed raised economic growth expectations with GDP now estimated between 5.8% and 6.6% for this year; higher PCE inflation of between 2.2% and 2.4%; while unemployment rate was lowered to between 4.2% and 4.7%.

Locally, Malaysia rolled out its first stimulus package of the year valued at RM20bil, with RM11bil in the form of direct fiscal injection. Targeted at affected sectors and assisting the people, the new package is expected to boost economic growth for the nation and will also see Malaysia's budget deficit rising to 6% from the earlier projected 5.4% rate. Meanwhile, the World Bank in a report this week said that it expects Malaysia to achieve high-income and developed nation status somewhere between 2024 and 2028, provided it takes the right economic reform measures in addressing structural issues. IMF too issued an assessment on Malaysia this week with an economic growth projection of 6.5% for 2021, driven by manufacturing and construction activities. In terms of economic data points, Malaysia reported a 1.2% growth in IPI for January 2021, thanks largely to the manufacturing index, which expanded by 3.5%. However, the distributive trade index dropped 2.9% y-o-y for same month, dragged by all three sub-components, in particular the 13.1% fall in the motor vehicles sub-index. However, vehicle sales for the month of February was much better as data from the Malaysian Automotive Association revealed that volume improved by 4.1% y-o-y and 30.3% m-o-m to 42,784 units.

Corporate

The award for Large Scale Solar @MEnTARI (LSS4) totalling some 823 MW made headlines last Friday with 30 companies being awarded capacity ranging from 10MW up to 50MW. Elsewhere, little known BCM Alliance clinched

a one year RM320mil contract to supply 10mil Covid-19 test kits to Thailand. In M&A activities, Felda failed to secure enough votes to take its subsidiary FGV Holdings private as it only garnered 81% of total shareholding after the close of its offer period. Meanwhile, Jardine Cycle & Carriage Ltd, the majority shareholder of Cycle & Carriage Bintang, embarked on yet another journey to take its subsidiary private, this time with a higher offer price of RM2.40 per share. Berjaya Corp also hogged the limelight this week with the appointment of Abdul Jalil Rasheed, the former President and CEO of Permodalan Nasional Bhd (PNB), as its new Group CEO.

Equity

In terms of equity market's performance, Nasdaq was the best performing for the past five trading days, rising by 3.5%, while other markets that were firmer rose by between 0.1% to 3.4%. Except for a steep 4% sell-off in India's SENSEX Index, other markets that were weaker for the period up to 18th March saw losses ranging between 0.1% and 1.3%. In terms of market participation, local retailers remained largest net buyers in the equity market for the period between 11th March to 17th March with net buying interest of RM476mil while local institutions were net sellers valued at RM490mil.

Pankaj is a former CIO and Head of Research, presently focused on economic, market and corporate analyses. The views expressed here are entirely the writer's own.

Chief Executive Officer, Minority Shareholders Watch Group

Private Placement - what to be aware of

Private placement exercises have been in the radar lately in view of the increased private placement activities among PLCs to raise cash by selling shares to pre-identified and undisclosed investors. According to data compiled by Bloomberg, Bursa Malaysia saw 151 deals in the first nine months of 2020, compared with 76 in the same period for 2019. For cash-strapped companies, private placements allow them to raise cash quickly from investors, even though they may get lower valuations compared to raising funds through the capital market e.g., rights issue. And given its faster execution process compared with other fund-raising methods, i.e., minimal regulatory requirements such as a prospectus or disclosure of detailed financial information – it is not surprising that private placement is becoming the method of choice for PLCs. However, earnings dilution awaits minority shareholders as they are not included in the placement process. There is also the risk of future speculation on the shares, and minority shareholders often do not know the identity of the placees. Under Chapter 6.15 of Bursa Securities Listing Requirements, the principal adviser that is appointed by the PLCs to submit the additional listing application of new shares to Bursa Malaysia will also submit the final list of placees to the exchange. However, this information need not be disclosed or announced publicly by the PLCs.

AirAsia's private placement

Let's examine AirAsia Group Berhad's private placement exercise which has been hogging the headlines recently.

In January this year, AirAsia proposed to raise up to RM454 million (assuming indicative issue price of 68 sen) via private placement of up to 20% of its share capital to third party investor(s) to address the group's immediate cash flow requirements. The exercise which is expected to be completed by 1QFY2021 will increase AirAsia's share base to 4 billion shares from the existing 3.3 billion. On 19 February (Friday), AirAsia completed the first tranche of its proposed private placement comprising 369.8 million new shares or 11% of its pre-exercise share base at an issue price of 67.5 sen. The issuance raised proceeds of about RM250 million. Subsequently, Hong Kong investor Stanley Choi Chiu Fai emerged as a substantial shareholder of AirAsia after acquiring 167.1 million shares or a 4.17% stake through the private placement exercise. This brings his accumulated stake in AirAsia to 332.5 million shares or 8.96%. Before the placement at 67.5 sen per share was announced, AirAsia was hovering around 70 sen - 80 sen.

On 23 February, two days after AirAsia's announcement on completion of the first tranche placement, the budget carrier's share

price surged as much as 14 sen or 17.17% to an intraday high of 95.5 sen, from the closing price of 81.5 sen the day before. Shares of AirAsia closed at 95 sen on 23 February. The rise in share price has obviously widened the discount between price of placement shares and market price. Of course, there would be some shareholders who have noted the price difference between the issue price of private placement (67.5 sen), and the market price (95 sen) – which is an appealing scenario indeed. Shareholders may be wishing that there was a rights issue instead as they will then be able to subscribe for AirAsia shares, presumably at a rights issue price of around 67.5 sen, as they would be in the money. At the same time, they could avoid the dilutive effect arising from the placements. However, there is no guarantee as to what the price will be when they get the rights shares. On the company's part, if it needs the money urgently and does not have the luxury of time, it will resort to raise monies through a private placement exercise.

Is the private placement mandate being abused by PLCs?

Given that AirAsia needed cash since early last year, the company would have had more than enough time to raise funds via a rights issue. But would the market sentiment and shareholders risk appetite be in favour of AirAsia back then? Maybe the market conditions then were not ideal for a successful rights issue. On the flip side, maybe a rights issue was not an option for AirAsia as the existing substantial shareholders may not want to undertake or subscribe the rights shares. The undertaking from substantial shareholders is important to ensure that the minimum subscription level is achieved for a successful rights issue exercise. In AirAsia's case, there may be compelling reasons for a private placement as the preferred choice for fund raising – the airline is in dire need of massive fund injection at the shortest possible timeframe to keep it afloat. Moreover, given AirAsia's cash-strapped situation, which emanated from the adverse effect of global travel restrictions in the aviation industry, it is unlikely that banks would extend credit to the ailing low-cost carrier at a reasonable cost. In this regard, Bursa Malaysia's good intent of temporarily raising the 10% private placement general mandate to 20% during the height of the COVID-19 pandemic last April has benefited financially distressed PLCs like Air Asia. Nevertheless, as the mandate was issued on an across-the-board basis – as opposed to case-by-case basis – it will not be far-fetched to assume that there are some PLCs which are taking advantage of the private placement mandate to raise funds when it would have been more equitable to all shareholders had they raised the fund through a rights

issue. Some companies have earmarked, well in advance, that the proceeds from their respective private placement exercises are intended to fund specific projects or to acquire certain machineries; questions then abound as why they did not pursue a rights issue instead. A rights issue will not dilute the stake of shareholders. Moreover, if the PLC is a company with a proven track record of generating value for shareholders, minority shareholders will not hesitate to partake in the rights issue exercise to support their companies. After all, by subscribing the rights shares, minority shareholders do not only prevent a potential dilution to their shareholding but can also expect their investment to appreciate over time.

Private placement vs rights issue

Therefore, if the primary objective is to raise fund for value accretive expansion or project, a rights issue should be the preferred choice. That way, every minority shareholder will have an opportunity to participate in the growth of the Company. Shareholders who are not keen on exercising their rights can always sell their rights entitlement in the marketplace provided the rights are undertaken on a renounceable basis. Regardless of the size of the placement, the newly issued shares will, to some extent, have an immediate dilutive effect on earnings per share and net assets per share of the PLC given there will now be more shares in circulation. In other words, the dilutive effect to minority shareholders is equal and proportionate to the size of the placement. In addition, concerns arise as to how long it will take before value can be accreted to the shares. In fact, there is an argument that regards private placements as pre-emptive rights for selected investors to access price-discounted shares. After all, the placees are often a selected group of unknown investors – whose identities are never revealed or whose motivation to participate in the exercise is as good as anybody's guess. Regulators should perhaps intervene by being more stringent in the approval process of the private placement exercise. This can be by means of requiring companies to identify their placees and offer disclosing their credentials to demonstrate their worthiness to be recipients of price-discounted placement shares. Likewise, there should be disclosure on how the placees are able to add value to the company in the short, medium and long-term. Last but not least, the proposed utilisation of proceeds must be specific. In China, market regulators are currently re-examining restrictions such as limits on the sale of shares bought via private placement and the mechanism for pricing shares in private offerings.
